## More on filters with AND, OR, and NOT

Previously, you explored how to add filters containing the **AND**, **OR**, and **NOT** operators to your SQL queries. In this reading, you'll continue to explore how these operators can help you refine your queries.

## **Logical operators**

**AND**, **OR**, and **NOT** allow you to filter your queries to return the specific information that will help you in your work as a security analyst. They are all considered logical operators.

#### **AND**

First, **AND** is used to filter on two conditions. **AND** specifies that both conditions must be met simultaneously.

As an example, a cybersecurity concern might affect only those customer accounts that meet both the condition of being handled by a support representative with an ID of 5 and the condition of being located in the USA. To find the names and emails of those specific customers, you should place the two conditions on either side of the **AND** operator in the **WHERE** clause:

1 2 3

```
SELECT firstname, lastname, email, country, supportrepid
FROM customers
WHERE supportrepid = 5 AND country = 'USA';
```

#### RunReset

FirstName	+   LastName +		Country	++   SupportRepId   ++
Jack Kathy Victor Julia	Chase   Stevens	jacksmith@microsoft.com   kachase@hotmail.com   vstevens@yahoo.com   jubarnett@gmail.com	USA USA USA USA	5     5     5     5

Running this query returns four rows of information about the customers. You can use this information to contact them about the security concern.

#### OR

The **OR** operator also connects two conditions, but **OR** specifies that either condition can be met. It returns results where the first condition, the second condition, or both are met.

For example, if you are responsible for finding all customers who are either in the USA or Canada so that you can communicate information about a security update, you can use an **OR** 

```
1
2
3
```

```
SELECT firstname, lastname, email, country
FROM customers
WHERE country = 'Canada' OR country = 'USA';
```

#### RunReset

+	+		+-		+-	+
F:	irstName	LastName	    -	Email		Country
F:	rançois	Tremblay		ftremblay@gmail.com		Canada
Ma	ark	Philips		mphilips12@shaw.ca		Canada
Je	ennifer	Peterson		jenniferp@rogers.ca		Canada
F:	rank	Harris		fharris@google.com		USA
Ja	ack	Smith		jacksmith@microsoft.com		USA
M:	ichelle	Brooks		michelleb@aol.com		USA
T	im	Goyer		tgoyer@apple.com		USA
Da	an	Miller		dmiller@comcast.com		USA
Ka	athy	Chase		kachase@hotmail.com		USA
He	eather	Leacock		hleacock@gmail.com		USA
J	ohn	Gordon		johngordon22@yahoo.com		USA
F:	rank	Ralston		fralston@gmail.com		USA
V:	ictor	Stevens		vstevens@yahoo.com		USA
R:	ichard	Cunningham		ricunningham@hotmail.com		USA
Pa	atrick	Gray		patrick.gray@aol.com		USA
J1	ulia	Barnett		jubarnett@gmail.com		USA
Ro	obert	Brown		robbrown@shaw.ca		Canada
E	dward	Francis		edfrancis@yachoo.ca		Canada
Ma	artha	Silk		marthasilk@gmail.com		Canada
Aa	aron	Mitchell		aaronmitchell@yahoo.ca		Canada
E	llie	Sullivan		ellie.sullivan@shaw.ca		Canada
+	+		+-		+-	+

The query returns all customers in either the US or Canada.

**Note:** Even if both conditions are based on the same column, you need to write out both full conditions. For instance, the query in the previous example contains the filter **WHERE** country = 'Canada' OR country = 'USA'.

#### **NOT**

Unlike the previous two operators, the **NOT** operator only works on a single condition, and not on multiple ones. The **NOT** operator negates a condition. This means that SQL returns all records that don't match the condition specified in the query.

For example, if a cybersecurity issue doesn't affect customers in the USA but might affect those in other countries, you can return all customers who are not in the USA. This would be more efficient than creating individual conditions for all of the other countries. To use the **NOT** operator for this task, write the following query and place **NOT** directly after **WHERE**:

# SELECT firstname, lastname, email, country FROM customers

WHERE NOT country = 'USA';

#### RunReset

					т.	
+   FirstName 	1	LastName	1		1	Country
+				luisg@embraer.com.br		Brazil
   Leonie		Köhler		leonekohler@surfeu.de		Germany
   François		Tremblay		ftremblay@gmail.com		Canada
   Bjørn		Hansen		bjorn.hansen@yahoo.no		Norway
František		Wichterlová		frantisekw@jetbrains.com		Czech Republic
Helena		Holý		hholy@gmail.com		Czech Republic
Astrid		Gruber		astrid.gruber@apple.at		Austria
Daan		Peeters		daan_peeters@apple.be		Belgium
Kara		Nielsen		kara.nielsen@jubii.dk		Denmark
Eduardo		Martins		eduardo@woodstock.com.br		Brazil
Alexandre		Rocha		alero@uol.com.br		Brazil
Roberto		Almeida		roberto.almeida@riotur.gov.br		Brazil
Fernanda		Ramos		fernadaramos4@uol.com.br		Brazil
Mark		Philips		mphilips12@shaw.ca		Canada
Jennifer		Peterson		jenniferp@rogers.ca		Canada
Robert		Brown		robbrown@shaw.ca		Canada
Edward		Francis		edfrancis@yachoo.ca		Canada
Martha		Silk		marthasilk@gmail.com		Canada
Aaron		Mitchell		aaronmitchell@yahoo.ca		Canada
Ellie		Sullivan		ellie.sullivan@shaw.ca		Canada
João		Fernandes		jfernandes@yahoo.pt		Portugal
I						

SQL returns every entry where the customers are not from the USA.

**Pro tip:** Another way of finding values that are not equal to a certain value is by using the <> operator or the != operator. For example, WHERE country <> 'USA' and WHERE country != 'USA' are the same filters as WHERE NOT country = 'USA'.

## **Combining logical operators**

Logical operators can be combined in filters. For example, if you know that both the USA and Canada are not affected by a cybersecurity issue, you can combine operators to return customers in all countries besides these two. In the following query, **NOT** is placed before the first condition, it's joined to a second condition with **AND**, and then **NOT** is also placed before that second condition. You can run it to explore what it returns:

1

```
2
                                                    3
SELECT firstname, lastname, email, country
FROM customers
WHERE NOT country = 'Canada' AND NOT country = 'USA';
RunReset
+-----
| FirstName | LastName | Email
+-----
| Luís | Gonçalves | luisg@embraer.com.br | Brazil
| Leonie | Köhler | leonekohler@surfeu.de | Germany
| Bjørn | Hansen | bjorn.hansen@yahoo.no
                                        | Norway
| František | Wichterlová | frantisekw@jetbrains.com
                                        | Czech Republic
| Helena | Holý | hholy@gmail.com
                                        | Czech Republic
| Astrid | Gruber | astrid.gruber@apple.at | Austria
| Daan | Peeters | daan_peeters@apple.be | Belgium
```

```
| Kara | Nielsen | kara.nielsen@jubii.dk | Denmark
                                          | Brazil
| Eduardo | Martins | eduardo@woodstock.com.br
| Alexandre | Rocha
                | alero@uol.com.br
                                           | Brazil
| Roberto | Almeida | roberto.almeida@riotur.gov.br | Brazil
| Fernanda | Ramos
               | fernadaramos4@uol.com.br | Brazil

+----
(Output limit exceeded, 25 of 38 total rows shown)
```

## Key takeaways

Logical operators allow you to create more specific filters that target the security-related information you need. The **AND** operator requires two conditions to be true simultaneously, the **OR** operator requires either one or both conditions to be true, and the **NOT** operator negates a condition. Logical operators can be combined together to create even more specific queries.
